

OCCUPATIONAL HEALTH OVERVIEW

OCCUPATIONAL HEALTH AND SAFETY

DO YOU NEED ASSISTANCE WITH OCCUPATIONAL HEALTH AND SAFETY CONCERNS?

SGS can offer a complete range of occupational health and safety services. We can:

- Provide sample media, conduct analysis and provide results documentation for a variety of airborne contaminants.
- Sample for bulk materials, airborne contaminants (metals, asbestos, solvents, and bioaerosols) and physical agents using direct reading instruments and laboratory techniques.
- Generate recommendations for occupational health and safety hazards within workplaces (engineering, administrative, personal protective equipment).
- Conduct occupational noise surveys and personal noise dosimetry.
- Evaluate of indoor environmental quality within buildings.
- Prepare and present educational programs and seminars on occupational health and safety topics.
- Audit and develop occupational health and safety programs, hazard specific control programs (such as designated substances, hearing conservation, restricted & confined spaces, thermal stress) and safe operating procedures.

ACCREDITATION

SGS' laboratories are accredited by internationally recognized bodies for specific environmental tests listed in our scopes of accreditation.

Some SGS laboratories are enrolled in the American Industrial Hygiene Association (AIHA) Proficiency Analytical Testing Program for metals, silica and beryllium.

For details on our accreditation visit our website.
